DETAILED ACTION

Claims 1-18 are pending in the application.

Election/Restrictions

Applicants' election without traverse of Group II (claims 11-18) in the reply filed on October 28, 2005 was acknowledged in the previous Office Action. The requirement was deemed proper and therefore made FINAL in the previous Office Action.

Claims 1-10 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention. Election was made **without** traverse in the reply filed on October 28, 2005.

Rejections made in the previous Office Action that do not appear below have been overcome by Applicants'

Art Unit: 1626

amendment to the claims. Therefore, arguments pertaining to these rejections will not be addressed.

Response to Arguments

Applicant's arguments with respect to claims 11-16 and 18 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 1626

Claims 11-16 and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over Bernhart et al. {U.S. Pat. 5,270,317} in combination with Anderson et al. {WO 99/38847}.

Determination of the scope and content of the prior art (MPEP §2141.01)

Applicants claim a process of making irbesartan by the process found in instant Figure 1 (reproduced below).

Art Unit: 1626

Bernhart et al. (columns 1-4) teach a process of making N-substituted heterocyclic compounds of formula (I) (reproduced below) wherein a compound of formula 2 (reproduced below) is reacted with a compound of formula 3 (reproduced below).

3

Art Unit: 1626

Note in Bernhart et al. that variable R_2 can be hydrogen and R_1 can represent tetrazolyl and cyano (column 1, lines 52-56). Also see the process in column 9, lines 54-62, the products and the processes of making Example 5A) and Example 5C) in columns 20 and 21. Bernhart et al. further teach that it is well within the skill of one skilled in the art to convert, for example, tetrazolyl protected by a trityl group or a cyano group to a tetrazolyl group by known methods (column 9, lines 15-28).

Ascertainment of the difference between the prior art and the claims

(MPEP §2141.02)

Bernhart et al. do not teach the use of a phase transfer catalyst in the process.

Finding of prima facie obviousness--rational and motivation (MPEP

§2142-2413)

However, Anderson et al., which reference Bernhart et al. on page 2, teach the use of a phase transfer catalyst in the process taught by Bernhart et al. (page

4). Anderson et al. further teach the temperature, pressure, solvents, etc. (pages 7-10).

One skilled in the art would thus be motivated to combine the teachings of Bernhart et al. and Anderson et al. to arrive at the instant claimed process with the expectation of obtaining Irbesartan in short duration and with increased productivity as taught by Anderson et al. (page 7, lines 27 through to page 8, lines 1-2). The instant claimed process would have been suggested to one skilled in the art and therefore, would be obvious to one skilled in the art.

Allowable Subject Matter

Claim 17 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
